SALLY-K BACKEND · API REFERENCE

Reviews & Cart API

Endpoint reference with sample request payloads and responses

---

Base URL: `http://localhost:3900/api/v1`

Auth: `Authorization: Bearer <token>` (from `/auth/login` or `/auth/signup`)

Modules documented: Reviews (`/reviews`), Cart (`/cart`)

Generated: 12 October 2026

Contents

1 Reviews API 3

1.1 Create a review — POST /reviews 4

1.2 List reviews for a product — GET /reviews 5

1.3 Edit a review — PATCH /reviews/:id 6

1.4 Delete a review — DELETE /reviews/:id 6

1.5 Rating summary on product responses 7

2 Cart API 8

2.1 Add an item to cart — POST /cart 9

2.2 View cart — GET /cart 11

2.3 Update item quantity — PATCH /cart/:id 12

2.4 Remove an item — DELETE /cart/:id 12

1. Reviews API

Lets a logged-in shopper rate and review a product (1–5 stars + a comment), edit or delete their own review later, and lets the storefront fetch a product's reviews plus an average-rating summary. One review per user per product is enforced — a second attempt returns `409`.

`POST` `/reviews`

1.1 Create a review

Auth required

Adds a review for a product on behalf of the logged-in user.

Header	`Authorization: Bearer <token>`
Header	`Content-Type: application/json`

Field	Type	Rules
`productId`	string (uuid)	Required, must reference an existing product
`rating`	integer	Required, 1–5
`comment`	string	Required, 5–1000 characters, trimmed

REQUEST BODY

```
{
  "productId": "b8d56340-70c5-48ec-a2b5-6abdad29f5e4",
  "rating": 5,
  "comment": "Absolutely love this piece, fits perfectly."
}
```

201 CREATED

```
{
  "status": true,
  "message": "Review added successfully",
  "data": {
    "id": "05d77816-0043-4810-b896-3a21159c6d08",
    "productId": "b8d56340-70c5-...9f5e4",
    "userId": "1a98738b-f576-...6379b32",
    "rating": 5,
    "comment": "Absolutely love this piece, fits perfectly.",
    "createdAt": "2026-10-12T12:19:08.829Z",
    "updatedAt": "2026-10-12T12:19:08.829Z",
    "user": { "fullName": "Test Buyer" }
  }
}
```

Status	Message	When
401	`Authentication token missing`	No/invalid bearer token
404	`Product not found`	`productId` doesn't exist
409	`You already reviewed this product. Edit your existing review instead.`	Second review by the same user on the same product
422	`Validation failed`	Missing/invalid rating or comment — per-field errors in `errors`

`GET` `/reviews?productId=<id>`

1.2 List reviews for a product

Public

Returns every review on a product (newest first) plus an aggregate rating summary — this is what powers the star rating and review list on the product page.

Query	`productId`	string (uuid), required

200 OK

```
{
  "status": true,
  "message": "Reviews fetched successfully",
  "data": {
    "reviews": [
      {
        "id": "05d77816-0043-4810-b896-3a21159c6d08",
        "productId": "b8d56340-...9f5e4",
        "userId": "1a98738b-...6379b32",
        "rating": 4,
        "comment": "Updating my review after a week of use.",
        "createdAt": "2026-10-12T12:19:08.829Z",
        "updatedAt": "2026-10-12T12:19:09.140Z",
        "user": { "fullName": "Test Buyer" }
      }
    ],
    "summary": { "average": 4, "count": 1 }
  }
}
```

Status	Message	When
404	`Product not found`	`productId` doesn't exist
422	`Validation failed`	`productId` missing or not a valid UUID

PATCH `/reviews/:id`

1.3 Edit a review

Auth required | Author only

Updates your own review. Fields are optional — send only what's changing.

Field	Type	Rules
`rating`	integer	Optional, 1–5
`comment`	string	Optional, 5–1000 characters

REQUEST BODY

```
{
  "rating": 4,
  "comment": "Updating my review after a week of use."
}
```

200 OK

```
{
  "status": true,
  "message": "Review updated successfully",
  "data": {
    "id": "05d77816-...9c6d08",
    "rating": 4,
    "comment": "Updating my review after a week of use.",
    "updatedAt": "2026-10-12T12:19:09.140Z",
    "user": { "fullName": "Test Buyer" }
    // ...plus productId, userId, createdAt
  }
}
```

Status	Message	When
401	`Authentication token missing`	No/invalid bearer token
404	`Review not found`	Review doesn't exist, or belongs to another user
422	`Validation failed`	Rating out of 1–5 range, or comment too short/long

DELETE `/reviews/:id`

1.4 Delete a review

Auth required | Author only

Removes your own review. No request body.

200 OK

```
{
  "status": true,
  "message": "Review deleted successfully",
  "data": null
}
```

Status	Message	When
404	`Review not found`	Review doesn't exist, or belongs to another user

1.5 Rating summary on product responses

`GET /products/:id` (buyer view) and `GET /products/mine/:id` (seller view) both embed a live-computed `rating` object — this drives the star rating shown on the product detail page. Average is rounded to 1 decimal place.

EXCERPT OF GET /PRODUCTS/:ID RESPONSE

```
{
  "data": {
    "id": "b8d56340-70c5-48ec-a2b5-6abdad29f5e4",
    "name": "Shoe",
    "...": "product fields",
    "rating": { "average": 4.5, "count": 2 }
  }
}
```

2. Cart API

Lets a logged-in user manage a per-user shopping cart. Adding the same product/size/color combination twice merges into one line (quantity increments) instead of duplicating rows. Every write is checked against the product's live stock.

`POST` `/cart`

2.1 Add an item to cart

Auth required

Adds a product/size/color variant to the logged-in user's cart. If the product defines `sizes` and/or `colors`, the matching field is required and must be one of the product's own options.

Field	Type	Rules
`productId`	string (uuid)	Required, must reference an existing, active product
`size`	string	Required if the product has sizes; must be one of them
`color`	string	Required if the product has colors; must be one of them
`quantity`	integer	Optional, default 1, ≥ 1, total after add can't exceed stock

REQUEST BODY

```
{
  "productId": "b8d56340-70c5-48ec-a2b5-
6abdad29f5e4",
  "size": "43",
  "color": "brown",
  "quantity": 2
}
```

201 CREATED

```
{
  "status": true,
  "message": "Added to cart",
  "data": {
    "id": "c427d908-763a-...40949e5cc937",
    "userId": "1a98738b-...6379b32",
    "productId": "b8d56340-...9f5e4",
    "size": "43",
    "color": "brown",
    "quantity": 2,
    "createdAt": "2026-10-
12T12:19:27.576Z",
    "updatedAt": "2026-10-
12T12:19:27.576Z",
    "product": {
      "name": "Shoe",
      "price": 40000,
      "images":
["https://res.cloudinary.com/.../shoe1.jpg"
],
      "stock": 4,
      "isActive": true
    }
  }
}
```

> Calling this again with the same `productId` + `size` + `color` does not create a second row — it adds `quantity` onto the existing line item and returns the updated line (still `201`).

Status	Message	When
401	`Authentication token missing`	No/invalid bearer token

404	`Product not found`	`productId` doesn't exist or is inactive
400	`Select a size for this product`	Product has sizes but none was sent
400	`Selected size is not available for this product`	`size` isn't in the product's size list
400	`Select a color for this product`	Product has colors but none was sent
400	`Selected color is not available for this product`	`color` isn't in the product's color list
400	`Only <n> left in stock`	Requested quantity (plus what's already in cart) exceeds stock
422	`Validation failed`	Missing/invalid `productId` or `quantity`

`GET` `/cart`

2.2 View cart

Auth required

Returns the logged-in user's cart lines, with the owning product's current name/price/images/stock, plus a computed subtotal and total item count.

200 OK

```
{
  "status": true,
  "message": "Cart fetched successfully",
  "data": {
    "items": [
      {
        "id": "c427d908-...9e5cc937",
        "userId": "1a98738b-...6379b32",
        "productId": "b8d56340-...9f5e4",
        "size": "43",
        "color": "brown",
        "quantity": 3,
        "createdAt": "2026-10-12T12:19:27.576Z",
        "updatedAt": "2026-10-12T12:19:27.957Z",
        "product": {
          "name": "Shoe",
          "price": 40000,
          "images": ["https://res.cloudinary.com/.../shoe1.jpg"],
          "stock": 4,
          "isActive": true
        }
      }
    ],
    "subtotal": 120000,
    "itemCount": 3
  }
}
```

PATCH `/cart/:id`

2.3 Update item quantity

Auth required · Owner only

Changes the quantity on one of your own cart lines. Re-validated against current stock.

Field	Type	Rules
`quantity`	integer	Required, ≥ 1, can't exceed product stock

REQUEST BODY

```
{ "quantity": 1 }
```

200 OK

```
{
  "status": true,
  "message": "Cart item updated
successfully",
  "data": {
    "id": "c427d908-...9e5cc937",
    "quantity": 1,
    "// ...plus userId, productId, size,
color, product"
  }
}
```

Status	Message	When
404	`Cart item not found`	Item doesn't exist, or belongs to another user
400	`Only <n> left in stock`	Requested quantity exceeds current stock

DELETE `/cart/:id`

2.4 Remove an item

Auth required · Owner only

Removes one line from your cart. No request body.

200 OK

```
{
  "status": true,
  "message": "Item removed from cart",
  "data": null
}
```

Status	Message	When
404	`Cart item not found`	Item doesn't exist, or belongs to another user
